

Ruan lab CTCF abcam antibody characterization

Goal: to characterize a CTCF abcam antibody (ENCAB871TEY: <https://www.encodeproject.org/antibodies/ENCAB871TEY/>) used by the Ruan lab for ChIA-PET experiments

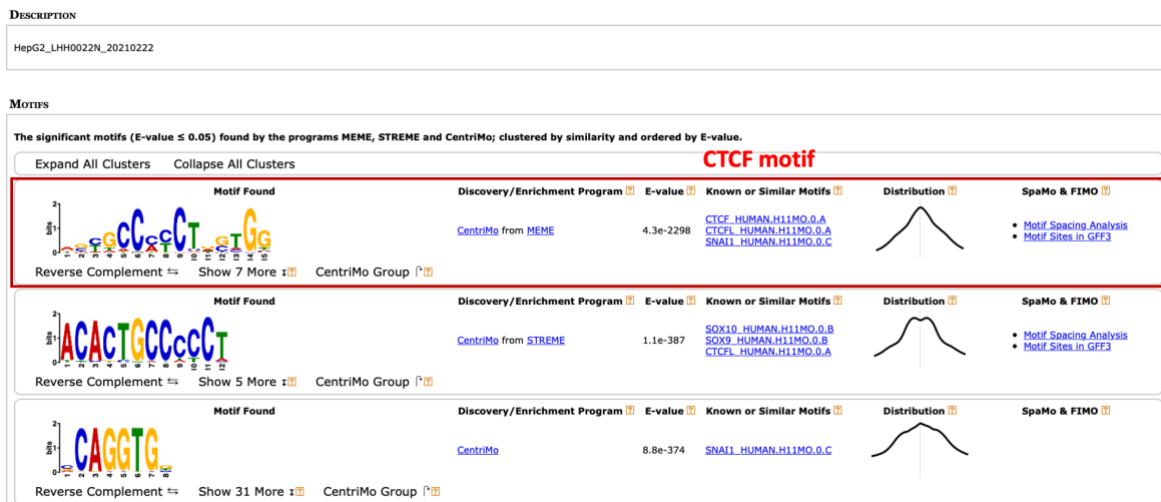

2. Secondary characterization: Motif analysis

Cell line	Antibody	ChIA-PET experiment ID	Peak file	Binding coverage file
HepG2	ENCAB871TEY	ENCSR411IVB	ENCF226GVS	ENCF812KSY
K562	ENCAB871TEY	ENCSR597AKG	ENCF995WHC	ENCF803SOP

Description:

- Of the peaks listed in the Ruan lab peak file, those with maximum summit of greater than 10 reads are identified and retained (n=36,306 for HepG2, n=28,398 for K562) [pyBedGraph v0.5.43].
- Maximum summit location of filtered peaks is extended by 50 bps upstream and downstream, resulting in a bed file with regions of length 100 bps [pyBedGraph v0.5.43].
- Sequences in the 100 bps regions are extracted via bedtools getfasta function using hg38 reference genome [bedtools v2.27.0].
- Motif analysis on these primary sequences are performed with the following command: `meme-chip -oc . -time 240 -ccut 100 -fdesc description -dna -order 2 -minw 6 -maxw 15 -db db/HUMAN/HOCOMOCov11_core_HUMAN_mono_meme_format.meme -meme-mod zoops -meme-nmotifs 3 -meme-searchsize 100000 -streme-pvt 0.05 -streme-totallength 4000000 -centrimo-score 5.0 -centrimo-ethresh 10.0 ${input_seq_file}` [MEME-ChIP v5.3.3]. Top 3 motifs are presented below.

a. Motif analysis on HepG2 cell line (top 3 motifs identified by MEME-ChIP)

b. Motif analysis on K562 cell line (top 3 motifs identified by MEME-ChIP)

DESCRIPTION

K562_LHK0001N_20210222

MOTIFS

The significant motifs (E-value ≤ 0.05) found by the programs MEME, STREME and CentriMo; clustered by similarity and ordered by E-value.

3. Examples

chr3:50100000-50640000 (540kb)

- UCSC genes
- CTCF motif
- HepG2 (LHH0022N)
- K562 (LHK0001N)
- NB4 (LHN0004)
- SK-N-SH (LHS0001H)

chr10:29300000-29600000 (300kb)

- UCSC genes
- CTCF motif
- HepG2 (LHH0022N)
- K562 (LHK0001N)
- NB4 (LHN0004)
- SK-N-SH (LHS0001H)
