

Differentiation Protocol for: DE_BG02

Differentiation of BG02 hESCs to definitive endoderm (DE) was performed by switching from defined media to DMEM/F12+100 ng/ml Activin A 20 ng/ml Fgf2 for four days with 25 ng/ml Wnt3a added on the first day. Cells were positive for DE markers CXCR4, SOX17, FOXA2, GSC.
